DETAILED ACTION

Allowable Subject Matter

1. Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance: Claims 1-9 are allowed since certain key features of the claimed invention are not taught or fairly suggested by prior art. **In claim 1**, “input value inputted in said comparator is compared with a first reference value and a second reference value at said comparator; (1) when said input value is not smaller than said first reference value, said first switching circuit is maintained in an ON state for a predetermined duration shorter than said fixed duration on a basis of an output from said comparator such that during said predetermined duration, a first voltage V1 is applied to the data electrode in said nth column; (2) when said input value is not greater than said second reference value, said second switching circuit is maintained in an ON state for a predetermined duration shorter than said fixed duration on a basis of said output from said comparator such that during said predetermined duration, a second voltage V2 is applied to the data electrode in said nth column; and (3) when said input value is smaller than said first reference value but is greater than said second reference value, said first switching circuit and said second switching circuit are maintained in OFF-states, respectively”. **In claim 4**, “said input value inputted in said comparator is compared with a first reference value and a second reference value at said comparator; (1) when said input value is not smaller than said first reference value, said first switching circuit is maintained in an ON state for a predetermined duration shorter than said fixed duration on a basis of an output from said comparator such that during said predetermined duration,

duration, a first voltage V1 is applied to said nth gate electrode; (2) when said input value is not greater than said second reference value, said second switching circuit is maintained in an ON state for a predetermined duration shorter than said fixed duration on a basis of said output from said comparator such that during said predetermined duration, a second voltage V2 is applied to the nth gate electrode; and (3) when said input value is smaller than said first reference value but is greater than said second reference value, said first switching circuit and said second switching circuit are maintained in OFF-states, respectively". In claim 7, said input value inputted in said comparator is compared with a first reference value and a second reference value at said comparator, (1) when said input value is not smaller than said first reference value, said first switching circuit is maintained in an ON state for a predetermined duration shorter than said fixed duration on a basis of an output from said comparator such that during said predetermined duration, a first voltage V1 is applied to said nth gate electrode; (2) when said input value is not greater than said second reference value, said second switching circuit is maintained in an ON state for a predetermined duration shorter than said fixed duration on a basis of said output from said comparator such that during said predetermined duration, a second voltage V2 is applied to the nth gate electrode; and (3) when said input value is smaller than said first reference value but is greater than said second reference value, said first switching circuit and said second switching circuit are maintained in OFF-states, respectively". The closest prior art Ando et al. (5,986,624) teach an electron-eliminates includes measuring voltages to each surface conduction emission device of a display panel ... and the characteristic shift voltage is higher than the characteristic measuring voltage and the characteristic measuring voltage is higher than a driving voltage ,

however, singularly or in combination with other prior art, fail to anticipate or render the above underlined limitations obvious.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yamaguchi et al. (6,621,475 B1) teaches an electron emitting characteristics.

McGrath et al. (2001/0043172 A1) teach a field emission display.

Kabuto et al. (2004/0189553 A1) teach a display apparatus.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mansour M. Said whose telephone number is 571-272-7679. The examiner can normally be reached on Monday through Thursday from 8:30-6:00 P.M. The examiner can also be reached on alternate Friday from 8:30 a.m. to 5:00 p.m. EST.
